# Getting Started with BIG-IP Virtual Edition on vCloud Director

---

## Steps to deploy BIG-IP VE

---

To deploy the BIG-IP<sup>®</sup> Virtual Edition (VE) system on vCloud Director, you will perform these tasks.

Step	Details
1	Choose the license you want to buy, the BIG-IP VE modules you want, and the throughput you need. See <i>SOL14810: Overview of BIG-IP<sup>®</sup> VE license and throughput limits</i> on the AskF5 <sup>™</sup> Knowledge Base ( <a href="http://support.f5.com">http://support.f5.com</a> ) for details.
2	Confirm that you are running a hypervisor version that is compatible with a BIG-IP VE release. See <i>Virtual Edition and Supported Hypervisors Matrix</i> on <a href="http://support.f5.com">http://support.f5.com</a> for details.
3	Verify that the host hardware meets the recommended requirements.
4	Download a BIG-IP VE image and deploy it.
5	Assign a management IP address to the virtual machine.

After you complete these tasks, you can log in to the BIG-IP VE system and run the Setup utility to perform basic network configuration.

# Prerequisites for BIG-IP Virtual Edition on vCloud Director

---

## Host CPU requirements

---

The host hardware CPU must meet the following requirements.

- The CPU must have 64-bit architecture.
- The CPU must have virtualization support (AMD-V or Intel VT-x) enabled.
- The CPU must support a one-to-one, thread-to-defined virtual CPU ratio, or on single-threading architectures, support at least one core per defined virtual CPU.
- If your CPU supports the Advanced Encryption Standard New Instruction (AES-NI), SSL encryption processing on BIG-IP® VE will be faster. Contact your CPU vendor for details about which CPUs provide AES-NI support.

## Host memory requirements

---

The number of licensed TMM cores determines how much memory the host system requires.

Number of cores	Memory required
1	2 Gb
2	4 Gb
4	8 Gb
8	16 Gb

## Virtual machine memory requirements

---

The guest should have a minimum of 4 GB of RAM for the initial 2 virtual CPUs. For each additional CPU, you should add an additional 2 GB of RAM.

If you license additional modules, you should add memory.

Provisioned memory	Supported modules	Details
4 GB or fewer	Two modules maximum.	AAM can be provisioned as standalone only.
4-8 GB	Three modules maximum.	BIG-IP® DNS does not count toward the module limit. Exception: Application Acceleration Manager™ (AAM®) cannot be provisioned with any other module; AAM is standalone only.
8 GB	Three modules maximum.	BIG-IP DNS does not count toward the module-combination limit.
12 GB or more	All modules.	N/A

---

**Important:** To achieve licensing performance limits, all allocated memory must be reserved.

---

## Virtual machine storage requirements

---

The BIG-IP® modules you want to use determine how much storage the guest needs.

Provisioned storage	Supported modules	Details
8 GB	Local Traffic Manager™ (LTM®) module only; no space for LTM upgrades.	You can increase storage if you need to upgrade LTM or provision additional modules.
38 GB	LTM module only; space for installing LTM upgrades.	You can increase storage if you decide to provision additional modules. You can also install another instance of LTM on a separate partition.
139 GB	All modules and space for installing upgrades.	The Application Acceleration Manager™ (AAM®) module requires 20 GB of additional storage dedicated to AAM. For information about configuring the Datastore volume, see <i>Disk Management for Datastore</i> on the AskF5™ Knowledge Base ( <a href="http://support.f5.com">http://support.f5.com</a> ) for details.

For production environments, virtual disks should be deployed Thick (allocated up front). Thin deployments are acceptable for lab environments.

---

**Note:** To change the disk size after deploying the BIG-IP system, see *Increasing disk space for BIG-IP® VE*.

---

## Virtual machine network interfaces

---

When you deploy BIG-IP® VE, a specific number of virtual network interfaces (vNICs) are available.

Four vNICs are automatically defined for you.

- For management access, one VMXNET3 vNIC or Flexible vNIC.
- For dataplane access, three VMXNET3 vNICs.

Each virtual machine can have a maximum of 10 virtual NICs.

# Deploying BIG-IP Virtual Edition in vCloud Director

---

## Deploying BIG-IP VE on vCloud Director

---

To create a BIG-IP® VE virtual appliance, download a template from F5® and deploy it in your environment.

1. In a browser, open the F5 Downloads page (<https://downloads.f5.com>) and log in.
  2. On the Downloads Overview page, select **Find a Download**.
  3. Under Product Line, select **BIG-IP v12.x/Virtual Edition**.
  4. Under Name, select **Virtual-Edition**.
  5. If the End User Software License is displayed, read it and then click **I Accept**.
  6. Download the BIG-IP VE file package ending with `-vCloud.zip`.
  7. Extract the file from the Zip archive.
  8. Start the vSphere client and log in.
  9. Click **Catalogs > My Organization's Catalogs** and on the vApp Templates tab, click **Upload**.
  10. Browse for and select the extracted `.ovf` file, type a name for the template, and click **Upload**.
  11. Type a name and description for the vApp template.
  12. Select a virtual data center and catalog.
  13. Click **Upload**.  
Click **Launch Uploads and Downloads Progress Window** to track the progress.
  14. Click **My Cloud > vApps**.
  15. Click **Add vApp from Catalog**.
  16. Select **My organization's catalogs** or **Public catalogs** from the list, select a vApp template, and click **Next**.
  17. Read and accept the license agreement, and click **Next**.  
The Name and Location pane opens.
  18. In the Inventory Location area, select a folder name and click **Next**.
  19. Under **Configure Virtual Machines**, specify the full name and computer name for the vApp, and configure the network settings.
    - a) Select the network for NIC0 from the list of networks.  
This network is used to manage the BIG-IP system. If you are using DHCP, you should have a DHCP server on this network.
- 
- Note: The **Select IP Assignment – Static** settings have no effect; you will configure the IP address in BIG-IP VE after the VM is deployed.*
- 
- b) Select the networks for NIC1, NIC2, and NIC3.
  - c) Click **Next**.
20. Configure organizational settings, such as **Fence vApp** and **IP persistence**, and click **Next**.
  21. Verify the settings and click **Finish** to start deployment.

If you need to create a redundant configuration, place the two BIG-IP VE virtual appliances (the active-standby pair) on separate physical hosts. You can accomplish this in one of two ways:

- Manually create a virtual machine peer on each host.

- If you are using VMware Dynamic Resource Scheduler (DRS), create a DRS rule with the **Separate Virtual Machine** option that includes each BIG-IP VE in the pair.

### Accessing the BIG-IP VE management user interface

---

If your network has DHCP, an IP address is automatically assigned to BIG-IP® VE during deployment. You can use this address to access the BIG-IP VE user interface or `tmsh` command-line utility.

If no IP address was assigned, you can assign one by using the BIG-IP Configuration utility.

---

***Important:** Do not use VMware tools to configure the IP address; the BIG-IP system will not use these changes.*

---

1. In the vSphere client, click **Launch Virtual Machine Console**.  
The console screen opens. After a few seconds, a login prompt appears.
2. At the password prompt, type `default`.
3. Type `config` and press Enter.  
The F5 Management Port Setup screen opens.
4. Click **OK**.
5. If you want DHCP to automatically assign an address for the management port, select **Yes**. Otherwise, select **No** and follow the instructions for manually assigning an IP address and netmask for the management port.

You can use a hypervisor generic statement, such as `tmsh show sys management-ip` to confirm that the management IP address has been properly assigned.

You can now log into the BIG-IP VE user interface, and license and provision BIG-IP VE.

# Updating BIG-IP VE

---

## Updating BIG-IP VE

---

You do not need to reinstall BIG-IP® VE in order to install updates. You can use the Software Management tool in the Configuration utility, or you can upgrade the software from the command line.

To update BIG-IP VE, you will:

1. Download the ISO and MD5 files.
2. Install the downloaded files to an inactive boot location.
3. Boot the BIG-IP VE to the new boot location.

## Download and import a BIG-IP VE update

To install an update, BIG-IP software needs access to the ISO file. If the update is a hotfix, you need the ISO files for both the base version and the hotfix.

1. In a browser, open the F5® Downloads page (<https://downloads.f5.com>).
2. Download the version's base ISO file and its associated MD5 checksum file.
3. Download the update ISO file and its associated MD5 checksum file.

---

***Important:** Before you perform the installation, you should test the integrity of the ISO files to verify that you have downloaded clean copies. Use an MD5 verification program to ensure that the downloaded ISO files' checksums match the values in their corresponding MD5 files.*

---

4. In the BIG-IP VE user interface, on the Main tab, click **System > Software Management > Image List > Import**.
5. Click **Browse** to navigate to the downloaded base level installation file.
6. When the image name appears in the **Software Image** field, click **Import** to begin the operation.

---

***Important:** Do not navigate away from this screen before the operation is done.*

---

When the import is complete, the Import page closes and the downloaded base image displays as an available image.

7. Click the Hotfix List tab.
8. At the right side of the screen, click **Import**.
9. Click **Browse** to navigate to the downloaded hotfix installation file.
10. When the image name appears in the **Software Image** field, click **Import** to begin the operation.

---

***Important:** Do not navigate away from this screen before the operation is done.*

---

When the import is complete, the Import page closes and the downloaded hotfix displays in the list of available images.

You can now install the downloaded update.

## Install a BIG-IP VE update

After you download and import the software installation image, you can initiate the installation operation. There are three boot locations on which you can install images on the BIG-IP® system. The process for installing a hotfix or a base version is essentially the same.

1. On the Main tab, click **System > Software Management**.  
The Software Management Image List screen opens.
2. In the Available Images area, select the software image you want to install and click **Install**.  
The Install Software Image popup screen opens.
3. Select the disk you want to install the image on, and then type or select a volume name, and click **Install**.

The upgrade process installs the software on the inactive disk location that you specify. This process usually takes between three and ten minutes.

---

***Tip:** If there is a problem during installation, you can use log messages to troubleshoot a solution. The system stores the installation log file as `/var/log/liveinstall.log`.*

---

The software image is installed.

When the installation operation is complete, you can safely reboot the newly installed volume or partition.

### Reboot after a BIG-IP VE update

When the installation operation is complete, you can safely reboot into the newly installed volume or partition.

1. On the Main tab, click **System > Software Management**.  
The Software Management Image List screen opens.
2. On the menu bar, click **Boot Locations**.  
The Boot Locations screen opens.
3. In the Boot Location column, click the link representing the boot location you want to activate.  
The properties screen for the boot location opens.
4. Click **Activate**.  
A confirmation screen opens.
5. Click **OK** to initiate the reboot operation.  
The system presents progress messages during the restart operation.

When the BIG-IP® VE system reboot is complete, the system presents the login screen. To configure the system, log in using an account that has administrative permissions.
