

# **BIG-IQ<sup>®</sup> System: Licensing and Initial Setup**

Version 4.4

# Table of Contents

<b>Legal Notices.....</b>	<b>5</b>
<b>Acknowledgments.....</b>	<b>7</b>
 <b>Chapter 1: BIG-IQ System Introduction.....</b>	 <b>15</b>
Overview: BIG-IQ system.....	16
Additional resources and documentation for BIG-IQ systems.....	16
 <b>Chapter 2: BIG-IQ User Interface.....</b>	 <b>17</b>
About the BIG-IQ system user interface.....	18
Filtering for associated objects.....	18
Customizing panel order.....	18
 <b>Chapter 3: Licensing and Initial Configuration.....</b>	 <b>19</b>
About licensing and initial configuration.....	20
Automatic license activation.....	20
Manual license activation.....	20
Defining DNS and NTP servers for the BIG-IQ system.....	21
Changing the default password for the root user.....	22
Changing the default password for the administrator user.....	22
Overview: SNMP and SMTP alerts.....	22
About integrating with SNMP version 1 or 2 for alerts.....	23
Configuring SNMP version 1 or 2 for alerts.....	23
About integrating with SNMP version 3 for alerts.....	24
Configuring SNMP version 3 for alerts.....	24
About integrating with SMTP for alerts.....	25
Specifying alert conditions.....	25
About authentication integration.....	25
Configuring authentication with LDAP.....	25
Configuring authentication with RADIUS.....	27
 <b>Chapter 4: Users, User Groups, and Roles.....</b>	 <b>29</b>
About users, user groups, and roles.....	30
Creating a BIG-IQ system user.....	30
Creating a BIG-IQ system user group.....	30
Associating a user or user group with a role .....	31
Disassociating a user from a role.....	31
 <b>Chapter 5: Configuring BIG-IQ High Availability.....</b>	 <b>33</b>
About a high availability active-active cluster.....	34

Configuring BIG-IQ system in an active-active high availability cluster.....34

**Chapter 6: Additional Network Configuration Options.....35**

    About additional network configuration options.....36

    Configuring an additional VLAN.....36

**Chapter 7: BIG-IQ System Management.....37**

    Upgrading BIG-IQ System.....38

    Creating a backup UCS file.....38

## Patents

This product may be protected by one or more patents indicated at:

<http://www.f5.com/about/guidelines-policies/patents>

## Export Regulation Notice

This product may include cryptographic software. Under the Export Administration Act, the United States government may consider it a criminal offense to export this product from the United States.

### **RF Interference Warning**

This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

### **FCC Compliance**

This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This unit generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user, at his own expense, will be required to take whatever measures may be required to correct the interference.

Any modifications to this device, unless expressly approved by the manufacturer, can void the user's authority to operate this equipment under part 15 of the FCC rules.

### **Canadian Regulatory Compliance**

This Class A digital apparatus complies with Canadian ICES-003.

### **Standards Compliance**

This product conforms to the IEC, European Union, ANSI/UL and Canadian CSA standards applicable to Information Technology products at the time of manufacture.

1. Java Technology Restrictions. Licensee shall not create, modify, change the behavior of, or authorize licensees of licensee to create, modify, or change the behavior of, classes, interfaces, or subpackages that are in any way identified as "java", "javax", "sun" or similar convention as specified by Oracle in any naming convention designation. In the event that Licensee creates an additional API(s) which: (a) extends the functionality of a Java Environment; and (b) is exposed to third party software developers for the purpose of developing additional software which invokes such additional API, Licensee must promptly publish broadly an accurate specification for such API for free use by all developer.
2. Trademarks and Logos. This License does not authorize an end user licensee to use any Oracle America, Inc. name, trademark, service mark, logo or icon. The end user licensee acknowledges that Oracle owns the Java trademark and all Java-related trademarks, logos and icon including the Coffee Cup and Duke ("Java Marks") and agrees to: (a) comply with the Java Trademark Guidelines at <http://www.oracle.com/html/3party.html>; (b) not do anything harmful to or inconsistent with Oracle's

rights in the Java Marks; and (c) assist Oracle in protecting those rights, including assigning to Oracle any rights acquired by Licensee in any Java Mark.

3. **Source Code.** Software may contain source code that, unless expressly licensed for other purposes, is provided solely for reference purposes pursuant to the terms of your license. Source code may not be redistributed unless expressly provided for in the terms of your license.
4. **Third Party Code.** Additional copyright notices and license terms applicable to portion of the Software are set forth in the `THIRDPARTYLICENSEREADME.txt` file.
5. **Commercial Features.** Use of the Commercial Features for any commercial or production purpose requires a separate license from Oracle. "Commercial Features" means those features identified in Table I-I (Commercial Features In Java SE Product Editions) of the Software documentation accessible at <http://www.oracle.com/technetwork/java/javase/documentation/index.html>.

## BIG-IQ System Introduction

---

- *Overview: BIG-IQ system*
-

## Overview: BIG-IQ system

The BIG-IQ® system is a tool that streamlines the management of F5 devices in your network. The functionality offered is dependent on your software license.

Cloud administrators use BIG-IQ Cloud to provide cloud tenants self-service access to shared computing resources such as networks, servers, storage, applications, and services. Cloud resources can be private or public, depending on the customer's requirements. Each tenant has restricted and dedicated access to cloud resources based on a specific user account or tenant role, ensuring that tenants have access only to their own resources. Cloud resources are easily expanded and reallocated as needed, providing flexible resource balancing.

Firewall managers use BIG-IQ Security to manage security firewalls for multiple devices from a central location. Firewall management includes discovering, editing, and deploying firewall configurations, as well as consolidating shared firewall objects. Once a firewall device is designated for central management, it is no longer managed locally unless there is an exceptional need.

Network administrators use BIG-IQ Device to interact with all of the managed F5 devices in their network. This centralized management includes the ability upgrade F5 devices, update configurations, and reallocate licenses as needed.

## Additional resources and documentation for BIG-IQ systems

You can access all of the following BIG-IQ® system documentation from the AskF5™ Knowledge Base located at <http://support.f5.com/>.

Document	Description
<i>BIG-IQ® Virtual Edition Setup</i>	BIG-IQ Virtual Edition (VE) runs as a guest in a virtual environment using supported hypervisors. Each of these guides is specific to one of the hypervisor environments supported for the BIG-IQ system.
<i>BIG-IQ® Systems: Licensing and Initial Configuration</i>	This guide provides the network administrator with basic BIG-IQ system concepts and describes the tasks required to license and set up the BIG-IQ system in their network.
<i>BIG-IQ® Device: Device Management</i>	This guide provides details about how to deploy software images, licenses, and configurations to managed BIG-IP devices.
<i>BIG-IQ® Cloud: Cloud Administration</i>	This guide contains information to help a cloud administrator manage cloud resources, devices, applications, and tenants (users).
<i>BIG-IQ® Cloud: Tenant User Guide</i>	This guide contains information to help tenants manage applications.
<i>BIG-IQ® Security Administration</i>	This guide contains information used to centrally manage BIG-IP® firewalls, policies, rule lists (as well as other shared objects), and users.
<i>Platform Guide: BIG-IQ® 7000 Series</i>	This guide provides information about setting up and managing the BIG-IQ 7000 hardware platform.
Release notes	Release notes contain information about the current software release, including a list of associated documentation, a summary of new features, enhancements, fixes, known issues, and available workarounds.
Solutions and Tech Notes	Solutions are responses and resolutions to known issues. Tech Notes provide additional configuration instructions and how-to information.

---

# Chapter 2

---

## BIG-IQ User Interface

---

- *About the BIG-IQ system user interface*
-

## About the BIG-IQ system user interface

---

The BIG-IQ® system interface is composed of panels. Each panel contains objects that correspond with a BIG-IQ system feature. Depending on the number of panels and the resolution of your screen, some panels are collapsed on either side of the screen. You can cursor over the collapsed panels to locate the one you want, and click the panel to open. To associate items from different panels, click on an object, and drag and drop it onto the object to which you want to associate it.

### Filtering for associated objects

The BIG-IQ system helps you easily see an object's relationship to another object, even if the objects are in different panels.

1. Hover on the object on which you want to filter, click the gear icon, and then click **Show Only Related Objects**.  
The screen refreshes to display only associated objects in each panel.
2. To remove a filter, click x icon next to the filtered object in a panel.

### Customizing panel order

You can customize the BIG-IQ system interface by reordering the panels.

1. Click the header of a panel and drag it to a new location, then release the mouse button.  
The panel displays in the new location.
2. Repeat step 1 until you are satisfied with the order of the panels.

## Licensing and Initial Configuration

---

- *About licensing and initial configuration*
  - *Overview: SNMP and SMTP alerts*
  - *About authentication integration*
-

## About licensing and initial configuration

---

BIG-IQ<sup>®</sup> system runs as a virtual machine in specifically-supported hypervisors or on the BIG-IQ 7000 series platform. After you set up your virtual environment your platform, you can license the BIG-IQ system. You initiate the license activation process with the base registration key.

The *base registration key* is a character string that the license server uses to verify the functionality that you are entitled to license. If the system has access to the internet, you select an option to automatically contact the F5 license server and activate the license. If the system is not connected to the internet, you can manually retrieve the activation key from a system that is connected to the internet, and transfer it to the BIG-IQ system.

### Automatic license activation

You must have a base registration key to license the BIG-IQ<sup>®</sup> system. If you do not have a base registration key, contact the F5 Networks sales group (<http://www.f5.com>).

If the BIG-IQ<sup>®</sup> system is connected to the public internet, you can use this procedure to activate its license.

1. Using a browser on which you have configured the management interface, type  
`https://<varname><management_IP_address><varname>` where `management_IP_address` is the address you specified for device management.  
 This is the IP address that the BIG-IQ system uses to communicate with its managed devices.
2. Log in to the BIG-IQ System with the default user name `admin` and password `admin`.
3. In the **Base Registration Key** field, type or paste the BIG-IQ registration key.
4. In the **Add-on Keys** field, paste any additional license key you have.
5. For the **Activation Method** setting, select **Automatic**, and click the **Activate** button.  
 The End User License Agreement (EULA) displays.
6. To accept the EULA, click the **Accept** button.
7. Click **Properties**.
8. In the **Host Name** field, type a fully-qualified domain name (FQDN) for the system.  
 The FQDN can consist of letters and numbers, as well as the characters underscore ( `_` ), dash ( `-` ), or period ( `.` ).
9. In the **Self IP Address** field, type the self IP address of your internal VLAN.  
 The self IP address must be in Classless InterDomain Routing (CIDR) format. For example:  
`10.10.10.10/24`.  
 This is the self IP address that managed devices use to communicate with the BIG-IQ system. This address is also referred to as the *discovery address*.  
 Once you save this self IP address, you cannot change it.
10. Click the **Save** button to save your configuration.

### Manual license activation

You must have a base registration key to license the BIG-IQ<sup>®</sup> system. If you do not have a base registration key, contact the F5 Networks sales group (<http://www.f5.com>).

If the BIG-IQ® system is not connected to the public internet, this procedure can activate its license.

1. Using a browser on which you have configured the management interface, type  
`https://<varname><management_IP_address><varname>` where `management_IP_address` is the address you specified for device management.  
 This is the IP address that the BIG-IQ system uses to communicate with its managed devices.
2. Log in to the BIG-IQ System with the default user name `admin` and password `admin`.
3. In the **Base Registration Key** field, type or paste the BIG-IQ registration key.
4. In the **Add-on Keys** field, paste any additional license key you have.
5. For the **Activation** method setting, select **Manual** and click the **Generate Dossier** button.  
 The BIG-IQ system refreshes and displays the dossier in the **Device Dossier** field.
6. Copy the text displayed in the Device Dossier field, and click the **Access F5 manual activation web portal** link.  
 Alternatively, you can navigate to the F5 license activation portal at  
`https://activate.f5.com/license/`.
7. Copy the text displayed in the Device Dossier field, and click the **Access F5 manual activation web portal** link.  
 Alternatively, you can navigate to the F5 license activation portal at  
`https://activate.f5.com/license/`.
8. Paste the dossier into the **Enter your dossier** field, and then click the **Next** button.  
 The Accept User Legal Agreement displays.
9. Click **Accept**.
10. Click **Properties**.
11. In the **Host Name** field, type a fully-qualified domain name (FQDN) for the system.  
 The FQDN can consist of letters and numbers, as well as the characters underscore ( `_` ), dash ( `-` ), or period ( `.` ).
12. In the **Self IP Address** field, type the self IP address of your internal VLAN.  
 The self IP address must be in Classless InterDomain Routing (CIDR) format. For example:  
`10.10.10.10/24`.  
 This is the self IP address that managed devices use to communicate with the BIG-IQ system. This address is also referred to as the *discovery address*.  
 Once you save this self IP address, you cannot change it.
13. To add an additional self IP address, click the + sign, and in the new **Self IP Address** field that the system creates, edit the duplicated self IP address to reflect the additional self IP address that you want to add.
14. Click the **Save** button to save your configuration.

## Defining DNS and NTP servers for the BIG-IQ system

After you license the BIG-IQ® system, you can specify the DNS and NTP servers.

Setting your DNS server and domain allows the BIG-IQ system to properly parse IP addresses. Defining the NTP server ensures the BIG-IQ system's clock is synchronized with Coordinated Universal Time (UTC).

1. Log in to BIG-IQ System with your administrator user name and password.
2. On the BIG-IQ Systems panel, click the gear icon next to the group name for which you want to define the DNS and NTP servers, and then click **Properties**.
3. Click **Services**.

4. In the **DNS Lookup Servers** field, type the IP address of your DNS server.
5. In the **DNS Search Domains** field, type the name of your search domain.  
The DNS search domain list allows the BIG-IQ system to search for local domain lookups to resolve local host names.
6. In the **Time Servers** fields, type the IP addresses of your Network Time Protocol (NTP) servers.
7. Click the **Save** button to save your configuration.

### Changing the default password for the root user

You must specify the management IP address settings for the BIG-IQ® system to prompt the system automatically create the root user.

After you initially license and configure the BIG-IQ system, it is important to change the password for the root user from the default password, `default`.

1. Log in to BIG-IQ Device with your administrator user name and password.
2. At the top of the screen, click **Access Control**.
3. On the Users panel, click the gear icon for the **root** user.
4. In the **Old Password** field, type the password.
5. In the **Password** and **Confirm Password** fields, type a new password.
6. Click the **Save** button.

### Changing the default password for the administrator user

You must specify the management IP address settings for the BIG-IQ® system to prompt the system automatically create the administrator user.

After you initially license and configure the BIG-IQ system, it is important to change the password for the administrator password user from the default password, `admin`.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Access Control**.
3. On the Users panel, click the properties gear for **Admin User**.
4. In the **Old Password** field, type the password.
5. In the **Password** and **Confirm Password** fields, type a new password.
6. Click the **Add** button.

## Overview: SNMP and SMTP alerts

---

You can easily manage the health of your network by configuring the BIG-IQ system to alert you when specific events occur for your managed devices. You can receive notifications by having the BIG-IQ system send traps to your SNMP manager and you can also configure the BIG-IQ system to send alerts for certain events to a specified individual. SNMP is an industry standard protocol for monitoring devices on IP networks. BIG-IQ® Device integrates easily with your SNMP manager, allowing you to centrally manage collected data. Once configured, the SNMP agent sends data collected from BIG-IQ Device to your third-party

SNMP manager. BIG-IQ Device is compatible with SNMPv1, SNMPv2c, and SNMPv3. Additionally, you can specify SNMP events to also trigger SMTP alerts.

## About integrating with SNMP version 1 or 2 for alerts

To prepare BIG-IQ® Device to interface with your SNMP version 1 or 2 manager, you must complete the following procedures.

- Configure SNMP agent
- Configure SNMP access
- Create an SNMP trap destination

## Configuring SNMP version 1 or 2 for alerts

You configure the SNMP agent and provide specific access to BIG-IQ® Device so that the SNMP manager can collect data.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. In the BIG-IQ Systems panel, click the gear icon next to the BIG-IQ management group you are configuring, and then click **Properties**.
4. Click **SNMP Config**.  
The screen displays the SNMP Agent Properties settings.
5. In the **Contact Information** field, type the name and email address of the person who is responsible for SNMP administration, and in the **Machine Location** field, type the location of the SNMP manager system.  
These details are for informational purposes only, and have no impact on how BIG-IQ Device interfaces with your SNMP manager.
6. To download the F5-specific MIBs, click the **Download MIB** link.
7. In the **Addresses/Networks** fields, type the IP address and networks (and the netmask if applicable) that the SNMP manager is allowed to access.
8. To add another address, click the plus ( + ) sign.
9. Click the **Save** button located at the top of the panel.
10. Click the **Access** tab.  
The SNMP Access settings display.
11. In the New v1/v2 Access Records section, from the **Type** list, select the appropriate protocol for the SNMP manager's IP address.
12. In the **Community** field, type the name of the associated community.
13. Click the **Traps** tab.
14. In the New v1/v2c Destinations section, from the **Version** list, select the version of SNMP you are using.
15. In the **Community**, **Destination**, and **Port** fields, type, respectively, the community name, IP address, and port for the trap destination.
16. To configure additional SNMP trap destination, click the plus ( + ) sign and specify the settings
17. Click the **Save** button located at the top of the panel.

You can now specify alert settings.

### About integrating with SNMP version 3 for alerts

To prepare BIG-IQ<sup>®</sup> Device to interface with your SNMP version 3 manager, you must complete the following procedures.

- Configure SNMP agent
- Configure SNMP access
- Create an SNMP trap destination

### Configuring SNMP version 3 for alerts

You configure the SNMP agent and provide specific access to BIG-IQ<sup>®</sup> Device so that the SNMP manager can collect data.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. Click **SNMP Config**.  
The screen displays the SNMP Agent Properties settings.
4. In the **Contact Information** field, type the name and email address of the person who is responsible for SNMP administration, and in the **Machine Location** field, type the location of the SNMP manager system.  
These details are for informational purposes only, and have no impact on how BIG-IQ Device interfaces with your SNMP manager.
5. To download the F5-specific MIBs, click the **Download MIB** link.
6. In the **Addresses/Networks** fields, type the IP address and networks (and the netmask if applicable) that the SNMP manager is allowed to access.
7. To add another address, click the plus ( + ) sign.
8. In the New v3 Access Records section, in the **User Name** field, type the SNMP manager's user name.
9. If you want to specify the authentication protocol for SNMP traps, from the **Auth Type** list, select the type that you want the system to use.
  - **MD5** specifies digest algorithm.
  - **SHA** specifies secure hash algorithm.
10. If you selected an **Auth Type**, from the **Privacy** list, also select the type of encryption you want the system to use to encrypt SNMP traps.
  - **AES** specifies Advanced Encryption Standard
  - **DES** for Data Encryption Standard.
11. In the **Privacy Password** field, type the required password for access.  
SNMPv3 has special requirements when you create plain-text passwords on a router or switch:
  - The password must be at least eight characters long.
  - The password can include alphabetic, numeric, and special characters, but it cannot include control characters.
12. In the **OID** field, type the object identifier (OID) you want to associate with this user.
13. Click the **Save** button located at the top of the panel.

You can now specify alert settings.

## About integrating with SMTP for alerts

To have a specific recipient receive an email message when an alert is triggered by a system event, configure BIG-IQ® Device to deliver locally-generated email messages using the internet-standard for electronic mail transmission, Simple Mail Transfer Protocol (SMTP). Sending an email alert ensures that administrators are immediately notified when a specific system event occurs so they can quickly troubleshoot potential issues.

## Specifying alert conditions

After you configure SNMP and or SMTP integration, you can specify the alerts that prompt BIG-IQ® System to send an email to the specified recipients.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. Click the name of the gear icon next to the group for which you want to specify alert conditions, and then click **Properties**.
4. Click **Alert Conditions**.
5. Select the check box next to each event that should trigger an alert email.
6. If a threshold is associated with the condition, in the adjacent **Threshold** field, type a value on which you want to trigger an alert email.
7. Click the **Save** button.

## About authentication integration

---

Integrating BIG-IQ® systems with your authentication server allows you to remotely manage user access based on specific BIG-IQ system roles and associated permissions.

The BIG-IQ system is compatible with RADIUS and LDAP protocols.

## Configuring authentication with LDAP

Before integrating LDAP authentication with the BIG-IQ® system, you must first:

- Use an LDAP browser to familiarize yourself with the groups and users in your directory's structure and their position in the hierarchy of organizational units (OUs).
- Decide how you want to map user names. The first option is to map users directly to their Distinguished Name (DN) in the directory with a user bind template in the form of `uid=<username>ou=people,o=sevenSeas`. For example, when you map John Smith's user name with his DN as `uid=<jsmith>ou=people,o=sevenSeas` and he logs in as `jsmith`, he is properly authenticated with his user name in the directory through his DN. The second option is to allow users to log in with names that do not map directly to their DN, by specifying a `userSearchFilter` in the form of `(&(uid=%s))` when creating the provider. For example, if John Smith's DN is `cn=John Smith,ou=people,o=sevenSeas`, but you would like him to be able to log in with `jsmith`, specify a `userSearchFilter` in the form of `(&(jsmith=%s))`. If your directory does not allow anonymous

binds, you must also specify a `bindUser` and `bindPassword` so that the BIG-IQ system can validate the user's credentials.

- Determine which groups in your directory to map into BIG-IQ groups. If you configured a `bindUser` and `bindPassword` for users, the BIG-IQ system displays a list of groups from which to choose. If you have not, you must know the DN for each group.
- Identify the DN under which all users and groups can be found. This is the root bind DN for your directory and is expressed as `rootDN` when you create a provider. The BIG-IQ system uses the root bind DN as a starting point when searching for users and groups.
- Determine the host IP address for the LDAP server. The default port is 389, if not specified otherwise.

When you configure the BIG-IQ system for user authentication through your company's LDAP service, you can associate existing and new users added to the LDAP service with specific BIG-IQ roles. The permissions associated with those roles are based on the user credentials. The BIG-IQ system integration is compatible with LDAP server versions 2 and 3, and OpenLDAP directory, Apache Directory Server, and Active Directory

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. In the BIG-IQ Systems panel, click the gear icon next to the BIG-IQ management group you are configuring, and then click **Properties**.
4. Click **Auth Provider**.
5. From the **User Directory** list, select **Remote RADIUS**.  
The screen refreshes to display RADIUS provider properties.
6. In the **Name** field, type a name for this new provider.  
This must be a unique name.
7. In the **Host** and **Port** fields, type the LDAP server's IP address (or fully qualified domain name) and port number.
8. If your LDAP server does not allow anonymous binds, in the **Bind User** and **Bind User Password** fields, type the full distinguished name and password for user with query access.
9. In the **Root DN** field, type the root context that contains users and groups.  
The root context must be a full distinguished name.
10. From the **Authentication Method** list, select an option.
  - **None** Select this option to prompt the LDAP server to ignore the user name and password.
  - **Simple** Select this option to require a user name and password for authentication.
11. In the **Search Scope** field, type a number to specify the depth at which searches are made.  
The default is 2. Alternatively, you can specify 0 for search only on the named object or 1 for a one-level search scope.
12. In the **Search Filter** field, type the LDAP filter expression that determines how users are found.  
The search filter is determined by your LDAP implementation.
13. In the **Connection Timeout** field, type the number of milliseconds after which the BIG-IP® system stops trying to connect to the LDAP server.
14. In the **Read Timeout** field type the number of milliseconds after which the BIG-IP system stops waiting for a response to a query
15. Select the **Perform Test** check box to test this provider.
16. Leave the **Group Search Filter** at its default query to return all groups under the provided rootDN.  
Alternatively, if you have a large number of groups (more than 100), you can narrow base the search on a specific term by typing a query with a "{searchterm}" token in this field.
17. In the Group Membership Filter field

18. Click the **Save** button to save this new provider.

The BIG-IQ system now authenticates users against the configured LDAP server.

## Configuring authentication with RADIUS

You must first license the BIG-IQ system and specify DNS settings before you can specify authentication settings.

When you configure the BIG-IQ® system for user authentication through your company's RADIUS service, you can associate existing and new users added to the RADIUS service with specific BIG-IQ roles. The permissions associated with those roles are based on the user credentials.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. In the BIG-IQ Systems panel, click the gear icon next to the BIG-IQ management group you are configuring, and then click **Properties**.
4. Click **Auth Provider**.
5. Click the **New** button.
6. In the **Name** field, type a name for this new provider.  
This must be a unique name.
7. From the **User Directory** list, select **Remote RADIUS**.
8. In the **Host** and **Port** fields, type the RADIUS server's IP address (or fully qualified domain name) and port number.
9. In the **Secret** field, type the case-sensitive text string used to validate communication.
10. To validate the user after adding it, in the **Test Connection User** and **Test Password** fields, type the user name and password.
11. Click the **Save** button to save this new provider.

The BIG-IQ system now authenticates users against the configured RADIUS server.

## Users, User Groups, and Roles

---

- *About users, user groups, and roles*
- *Creating a BIG-IQ system user*
- *Creating a BIG-IQ system user group*
- *Associating a user or user group with a role*
- *Disassociating a user from a role*

### About users, user groups, and roles

---

A *user* is an individual to whom you provide resources. You provide access to users for specific BIG-IQ® system functionality through authentication. You can associate a user with a specific role, or associate a user with a user group and then associate the group with a role. A *role* is defined by its specific privileges. A *user group* is a group of individuals that have access to the same resources. When you associate a role with a user or user group, that user or user group is granted all of the role's corresponding privileges.

### Creating a BIG-IQ system user

---

You create a user so you can then associate that user with a particular role to define access to specific BIG-IQ® system resources.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Access Control**.
3. Hover over the Users header, and click the + icon when it appears.  
The panel expands to display the User properties.
4. From the **Auth Provider** list, select the provider that supplies the credentials required for authentication.
5. In the **Full Name** field, type a name to identify this user.  
The full name can contain a combination of symbols, letters, numbers and spaces.
6. In the **Password** and **Confirm Password** fields, type the password for the new user.
7. Click the **Add** button.

You can now associate this user with a role.

### Creating a BIG-IQ system user group

---

Create a user group to offer individual users access to the same resources.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Access Control**.
3. Hover on the User Groups header, and click the + icon when it appears.
4. In the **Name** field, type a name for this new user group.
5. From the **Auth Provider** list, select the provider that supplies the credentials required for authentication.
6. Click the **Add** button.

You can now associate users with this user group, and the group with a role

## Associating a user or user group with a role

---

Before you can associate a user or user group with a role, you must create a user or user group.

When you associate a user or user group with a role, you define the resources users can view and modify.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Access Control**.
3. In the Users or User Groups panel, click the name you want to associate with a role, and drag and drop it on a role in the Roles panel.  
A confirmation pop-up screen opens.
4. Click the **Confirm** button to assign the user or user group to the selected role.

This user or user group now has access to the resources associated with the role you specified.

## Disassociating a user from a role

---

Use this procedure to disassociate a user from an assigned role.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **System >Users**.
3. Click the name of the user you want to edit.
4. For the User Roles property, delete the user role that you want to disassociate from this user.
5. Click the **Save** button to save your changes.

This user no longer has the privileges associated with the role you deleted.

## Configuring BIG-IQ High Availability

---

- *About a high availability active-active cluster*
- *Configuring BIG-IQ system in an active-active high availability cluster*

### About a high availability active-active cluster

---

You can ensure that you always have access to managed BIG-IP® devices by installing two or more BIG-IQ® systems in an active-active, high availability (HA) configuration. Any configuration change that occurs on one BIG-IQ system is immediately synchronized with its peer devices. If a BIG-IQ® system in an active-active HA configuration fails, a peer BIG-IQ system takes over the device management.

### Configuring BIG-IQ system in an active-active high availability cluster

---

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. Hover over the BIG-IQ Systems header, click the + icon when it appears, and then click **Add Device**. The Add Device screen opens.
4. In the **Peer IP Address** field, type the self IP address (on the internal VLAN) of the peer system.  
Do not use the management IP address of the peer system.
5. In the **User name** and **Password** fields, type the administrative user name and password for the system.
6. From the **Group** list, select **Management Group**.
7. Click the **Save** button.

If discovery of the newly configured BIG-IQ system fails, a **Delete** button displays. Verify the correct self IP address and credentials. Then click the **Delete** button to remove the incorrect information, and re-type the self IP address, user name, and password.

---

# Chapter 6

---

## Additional Network Configuration Options

---

- *About additional network configuration options*
  - *Configuring an additional VLAN*
-

### About additional network configuration options

---

During the licensing and initial configuration procedures, you configure a single VLAN and associated self IP addresses. This is all the networking configuration required to start managing devices. However, if you find you need additional VLANs, the BIG-IQ® system provides you with the ability to add them as required.

### Configuring an additional VLAN

---

You must have licensed the BIG-IQ system before you can add a VLAN.

You have the option to configure an additional VLAN after you license and perform the initial configuration of the BIG-IQ system.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. Hover over the VLANs panel and click the + sign when it appears.
4. In the **Name** and **Description** fields, type a name and description to identify this new VLAN.
5. From the **Device** list, select the BIG-IQ system to associate with this new VLAN.
6. From the **Interface** list, select the port that you want this VLAN to use.

The *interface* is a physical or virtual port that you use to connect the BIG-IQ system to managed devices in your network.

7. Click the **Add** button to save this VLAN.
8. Hover on the Self IP Addresses panel and click the + when it appears.
9. In the **Name** and **Address** and **Description** fields, type the name, and self IP address.
10. From the Device list, select the BIG-IQ system to associate with this new self IP address.
11. From the **VLAN** list, select the VLAN to which you want to associate this self IP address.
12. Click the **Add** button to save this self IP address.

## BIG-IQ System Management

---

- *Upgrading BIG-IQ System*
  - *Creating a backup UCS file*
-

## Upgrading BIG-IQ System

---

Before you can upgrade BIG-IQ® system, you must perform the following tasks:

- Reactivate your current license to ensure that you have a valid service check date.
- Download the ISO file for the upgrade from F5 Downloads to `/shared/images` on the BIG-IQ system. If you need to create this directory, use the exact name `/shared/images`.
- Create a backup of the user configuration set (UCS), locate it in the `/var/local/ucs` directory on the source installation location, and copy the UCS file to another system for safe keeping.

You use this procedure to upgrade a BIG-IQ system to a new software version.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. Expand Management Group by clicking the arrow next to it, and then click **localhost**.
4. Click **Software Update**.  
The details of the current software installation display.
5. Click the **Update** button.
6. From the **Software Image** list, select the new image or browse to the location to which you saved it.
7. From the **Install Location** list, select the volume to which you want to install the image.
8. For the **Options** setting, select one:
  - To automatically reboot the BIG-IQ system to the specified volume immediately after the software is installed, select **Reboot after Live Install**.
  - To manually reboot the BIG-IQ system at another time from the **System > Properties** screen, select **Set Default Boot Location**.
9. Click the **Apply** button.

The BIG-IQ system upgrades the software and rolls forward the UCS file.

## Creating a backup UCS file

---

It is best practice to create a backup of the UCS file for each device in your network, including the BIG-IQ system itself) on a regular basis and before performing a software upgrade. The UCS file backup provides your network with added stability in the event that a system needs to be restored.

1. Log in to BIG-IQ System with your administrator user name and password.
2. At the top of the screen, click **Configuration**.
3. Hover on the Backups panel header, click the + sign when it appears, and then click **Add Backup**.
4. In the **Name** and **Description** fields, type a file name and description to identify this UCS backup file.  
The file name you define in the **Name** field must include the extension `.ucs`.
5. From the **Device** list, select the device for which you want to create the UCS file backup.
6. If you want to include the SSL private keys in the backup file, select the **Include Private Keys** check box.
7. To encrypt the backup file, select the **Encrypt Backup Files** check box.
8. Click the **Create** button

- 9.** To view the status of the backup or change its description, click the gear icon.

This UCS backup file is now available for restoration.
